Make a smart move today

Connect with Smart-UPS™ from APC™ by Schneider Electric™, engineered to give you more power, more protection and more efficiency

With today's rapidly changing IT technologies, it's not just servers that need to be protected anymore.

As more customers are accessing data via the cloud or co-location service providers, the network connections that allow access to off- site data and content are increasingly critical.

And just as important, remaining on-premises storage devices and data still need protecting. Our highly efficient, Smart-UPS uninterruptible power supply units can match the power needs of any network closet, server room, or other distributed environments.

Why is the Smart-UPS backup unit an intelligent choice?

- Extended run capability provides enough power to ride through extended blackouts.
- Comprehensive software lets you manage physical and virtual IT infrastructure from anywhere.
- Lowers energy usage
- Maximises network availability & maintains uptime of critical systems and ensures reliability

APC by Schneider Electric

The smarter solution for critical needs

Protect network availability with Smart-UPS™, the most trusted name in power protection.

Your business depends on your business network. Protecting that network, therefore, is more critical than ever.

Known for their reliability for over 25 years, APC™ by Schneider Electric™ Smart-UPS uninterruptible power supply units eliminate costly downtime by providing reliable, network-grade power over a wide range of utility conditions.

They keep employees connected to business-critical applications whether they are in house, at a co-location facility, or in the cloud.

Why Smart-UPS is a smarter solution

- Manage UPS remotely over the network
- Scale runtime quickly as needed
- Maximise performance with intelligent battery management
- Lowers energy usage
- Maximises network availability & maintains uptime of critical systems
- Ensures reliability

Don't risk downtime.
Optimise your network investment.

APC by Schneider Electric

Always secure.
Always available.

Moving to the cloud or co-location requires proper power protection on site.

Protecting today's server and networking infrastructure when moving to the cloud or utilising co-location is vital yet challenging.

As more of your data moves off site, your network becomes more critical, requiring better power protection to keep everything running. The decision to move to the cloud or to use a co-location facility may be a wise one, as it keeps you agile and open to meet any business concerns.

In your quest to protect the availability of your network, your concerns may include keeping your network efficient, ensuring enough flexibility, and guaranteeing top-notch health of your IT environments. The solution to these issues?

- The best-in-class, innovative Smart-UPS™ unit from APC™ by Schneider Electric™ helps you maintain access to your data while protecting your network routers and switches along with the rest of your networking gear.
- The Smart-UPS family protects your power in server rooms, network closets, and other distributed environments helping you meet those changing IT needs.

Protect your network with proven reliability Smart-UPS today!
